

Research program:
“Development and Experimentation of methodologies for intellectual property management to support product development innovation within SMEs”

Annex Code 7

Department of Management, Information and Production Engineering

Tutor: Prof.ssa Caterina Rizzi

Program

The research program is composed of three phases:

PHASE 1: State of art analysis (Month 1- Month 4)

This phase consists in selecting the best-in-class tools and defining the basis to develop the platform specifically targeted to product innovation.

PHASE 2: Definition of the platform (Month 3- Month 9)

This phase consists in defining the architecture of the platform that should permit the efficient use of the tool and databases selected in the previous phase.

PHASE 3: Definition of the platform (Month 8- Month 12)

This phase consists in testing first the platform with case studies and then with real industrial case studies.
