An introduction to the concept of sustainable development

Giovanni Orlando (PhD Goldsmiths, MSc UCL)

Postdoctoral Fellow

Project ITALY® (Italian TALented Young ®esearchers)

Department of Humanities and Social Sciences

When did the concept of sustainable development originate and what is its meaning today? The seminar will try to answer this important question by tracing the history of the concept from its genesis to the present day. Sustainable development is an idea that conflates two ambiguous and problematic terms: development and sustainability. During the seminar we will therefore attempt to unpack each of these terms, in order to gain a deeper and more critical understanding of the idea.

La lezione è promossa dall'Osservatorio CORES e rientra nelle attività del programma di ricerca ITALY® - Italian TALented Young ®esearchers
